| 16           | Holy Spirit Catholic Church   | 2         | Keaney Place    | City Beach     | The Holy Spirit Memorial Church is one element of the Holy Spirit complex which also includes the Administration Centre, Presbytery and Primary School. The Church is the major feature of the site and is a landmark in a range of views across City Beach. The church is of buff brick construction with a prominent curved aesthetic. The church has a blank curved elevation to Keaney Place with an increasingly enlivened elevation as it curves around the driveway. The entrance is located to the southern aspect of the building with stepped entrance to double aluminium doors and a small canopy supported on broad circular brick column. The church continues to curve around with brick elevations and highlight aluminium framed openings until it reaches the blank brick elevation facing the street. The feature aspect of the building is the sloping visible roof form culminating in a fanned window, parapet wall and feature cross. This aspect of the church can be seen in long views across City Beach. The church is a landmark feature, bearing a resemblance to a shell and is dedicated to those who have served in the various conflicts in which Australia has been involved. | The following statement is taken from the State Register Entry for the place. Holy Spirit Catholic Church, City Beach, comprising a Late Twentieth Century Organic style brick church (1973-74), including original fittings and furnishings of high design quality, grotto (1994-95), and ancillary structures has cultural heritage significance for the following reasons:  
  - the place is a striking landmark constructed to a unique sculptural design, with its dramatic external form, high quality interior spaces, and finely designed sanctuary fittings and furnishings;  
  - the place is a good example of a church designed to facilitate liturgical and theological changes in the Catholic church following the Second Vatican Council, with its open interior layout, clear site lines, placement of altar and baptistry, and lack of barriers to the sanctuary area;  
  - the place is a very fine representative example of Late Twentieth Century Organic style architecture, featuring sweeping curved brick walls and an overall irregular curved floor plan;  
  - the place demonstrates technical proficiency in its use of steel reinforced curved brickwork, and the finished building receiving the 1975 Clay Brick Award; and  
  - the place was designed by the prominent 1950s-1960s Western Australian architect firm Forbes & Fitzhardinge, who were leading exponents of contemporary late twentieth century architecture. | Category 1 |
| 21           | Quarry Amphitheatre           | 145       | Oceanic Drive   | City Beach     | Quarry Amphitheatre sits on northern slopes of Bold Park, accessed via Waldron Drive or Scenic Drive. The place consists of a former limestone quarry that has been adapted to form a theatre space, consisting of an Entrance, Auditorium, Stage, Backstage and rear area, set between two limestone faces. The Auditorium consists of a number of grassed tiers orientated in a southerly direction looking back towards the stage. The tiers are edged with concrete pavers and are divided into two sections by a central paved aisle. The Stage is a rectangular timber floor set on a steel frame with timber deck. The Backstage area is located below the stage. | The following statement is taken from the State Register Entry for the place. Quarry Amphitheatre, City Beach comprising a 556 seat open air Amphitheatre located high upon Reabold Hill in City Beach with panoramic views of Bold Park towards the City, within a former limestone quarry, in a natural bushland setting, has cultural heritage significance for the following reasons:  
  - the place is unique in Western Australia as a former limestone quarry that has been adapted for re-use as an amphitheatre;  
  - the place is rare as an extant inner Perth metropolitan quarry associated with the development of the limestone quarrying industry in the late nineteenth century;  
  - the stone from the quarry was used in some of Perth's early buildings including the foundations of Perth Town Hall;  
  - the place is significant for its associations with prominent settlers Walter Padbury and Henry Trigg, who were significant figures in the early development of Western Australia;  
  - the place has aesthetic value for its bushland setting and unobstructed views of the city;  
  - the place has social significance to the local and wider community having been a venue for concerts, ballet and other cultural events since 1986; and  
  - the place is associated with Diana Waldron, founder of Perth City Ballet, who with her husband architect, Ken Waldron, was responsible for the inception, fundraising and construction of the Quarry. | Category 1 |
Perry Lakes Scoreboard is the last remaining element of the former sporting facilities erected for the Commonwealth Games in 1962. The scoreboard sits in a prominent elevated position amidst contemporary townhouse developments which has resulted in a loss of context for the structure.

The scoreboard is a three-storey structure of pale brick construction to ground level and side elevations. The upper levels of the façade are glazed with a glazed parapet topped with four flagpoles.

The façade of the building has been altered with the double height glazing replacing the scoreboard, the removal of the balcony and the replacement of the small openings at ground level with full height window and door arrangements. Whilst the structure still makes a statement in the landscape, the integrity and authenticity of the structure has been degraded through the redevelopment of the site and adaptation of the scoreboard.

Model Timber Home located at 12 The Boulevard Floreat, comprises a single-storey, painted Jarrah weatherboard and tile residence. The front elevation of the house is set back from the front boundary and located towards the eastern side of the lot with a pathway down the western side of the house. The front and side boundaries are defined by a low non-original picket fence.

The front garden features many original plants including a tall poplar tree on the eastern side of the house, rose beds and borders of various flowering shrubs typical of gardens from the inter-war period. Fixed to the side of the house is the foundation stone laid by the Honourable James Joseph Kennedy, Minister for Employment, Child Welfare and Industrial Development, on 5 November 1933, on behalf of the Model Homes Committee.

The house comprises the original section constructed in 1933 and a modest addition at the rear constructed in 1977. External walls are of painted Jarrah weatherboard on brick footings.

The roof is moderately pitched and topped with a feature gable over the front verandah. The roof is clad with terracotta tiles and the gable features vertically hung timber shingles which have been retained unpainted and stained, with a circular roof vent which is painted white. The eaves are wide and generally lined, apart from the eaves of the front gable which are battened. There are two chimneys, which are rendered and painted brick with a simple ridge detail to the tops with terracotta pots.

Windows are timber framed double hung casements with timber framed fly screens fixed externally. The front door is timber with three vertical panels to the lower section and one glazed leadlight panel of obscure uncoloured glass. The door has matching side panels with sidelights. The gardens are in good condition with original features, trees and plants.

Model Brick Home located at 6 The Boulevard Floreat, comprises a single storey, rendered brick and tile residence which, together with the Model Timber Home located at 12 The Boulevard Floreat, was one of the first two homes constructed in Floreat Park No 1 Estate, a residential subdivision designed on the principles of a Garden Suburb.

Model Brick Home is sited on a rectangular residential lot with a driveway down the western side of the house to the garage at the rear. There is a curved entrance driveway at the front of the house on the western side. The front garden area on the eastern side features a concrete slab retaining wall which separates the driveway from the garden. The house comprises the original section constructed in 1933 and additions constructed in 1995.

The scoreboard has aesthetic value as an intact demonstration of the Post War International style executed in brick.

The scoreboard has aesthetic value as a landmark in the streetscape as it is a unique element in a residential complex that is well known to many members of the community.

The scoreboard has historic value for its association with the 1962 Empire and Commonwealth Games that were a significant event in the Perth community.

The following statement is taken from the State Register Entry for the place.

Model Timber Home, a single-storey Jarrah weatherboard and tile residence in the Inter-War Californian Bungalow style set in original landscaped gardens and built as a model home in 1934, has cultural heritage significance for the following reasons:

- the place was one of two winning designs in the competition run by the Model Homes Committee as part of the Building Revival Campaign, an initiative to promote and stimulate employment in the home building industry during the economic depression of the 1930s;
- the place is a significant example of the work of architect Reg Summervales who was a prominent member of the architectural profession in Western Australia during the inter-war period;
- the place is a rare example of a home which has remained substantially unchanged with original fittings, furnishings and garden layout since its construction in 1934;
- the place was one of the first two homes built in the Floreat Park No 1 Estate, which was planned as a Garden Suburb by the City of Perth under the influence of Town Clerk WE Bold who promoted the principles of the Garden City Movement in Western Australia in the 1920s and 1930s; and
- the place has associations with the Honourable James Joseph Kennedy, Minister for Employment, Child Welfare, and Industrial Development, who laid the foundation stone and subsequently opened the house.

The following statement is taken from the State Register Entry for the place.

Model Brick Home, a single-storey brick and tile residence in a simplified version of the Inter-War Old English style set in landscaped gardens and built as a model home in 1934, has cultural heritage significance for the following reasons:

- the place was one of two winning designs in the competition run by the Model Homes Committee as part of the Building Revival Campaign, an initiative to promote and stimulate employment in the home building industry during the economic depression of the 1930s;
- designed by architect Howard Bonner, the place is a fine example of an architect designed home from the inter-war period, exhibiting the influence of a simplified form of the Inter-War Old English architectural style.

<td>Barrett Street</td>
<td>Wembley</td>
<td>The Catherine McCauley Centre is an elevated site in Wembley containing aged care facilities, children’s welfare facilities and disability services. The site contains a mix of purpose built accommodation and facilities as well as the historic buildings that formed part of the early occupation of the site. Together with the more contemporary developments on the site, the Catherine McCauley Centre forms a precinct of structures and landscape elements developed by the Sisters of Mercy for religious and social welfare purposes. The main vehicular access to the services part of the site is from Barrett Street with additional access to the residential component from Ruislip Street. The site is a mix of buildings, hard landscaping/parking and soft landscaping with trees, other plantings and lawned areas. The historic elements of the site comprise: • Former Benedictine Stables • Olive Trees • Remnants of Cemetery • Old School (also referred to as the Old Chapel and now named the Martin Kelly Centre) • St Roch’s • Former Laundry building • St Vincent’s Foundling Home (fmr) • Kindergarten building • Nursery building • St Gerard’s Hospital</td>
<td>The extension has been designed to complement the original in terms of roof pitch, materials and finish and is not visible from the street. External fabric of Model Brick Home features painted rendered masonry walls on limestone footings. The roof is steeply pitched and gabled with a prominent gabled wall to the front elevation with a rectangular timber vent at the apex. This wall extends in a prominent curve beyond the edge of the house to the eastern site boundary. There is a rendered banded detail to the top edge of the curved wall. An arched opening in the eastern side of the front elevation provides access to the side of the house through a timber garden gate. The roof is clad with terracotta tiles. Square profile gutters and downpipes are not original and the original chimney has been removed. There is an open terrace with low walls at the front of the house accessed by five front steps. The terrace and steps are clad with slate which is not original. Two timber pergolas which have been constructed over the front verandah are not original. The original foundation stone is extant on the front wall of the house. Original windows are timber framed six paneled casements with timber mullions. The front door is timber with an elaborate diamond panel in the centre and original brass door handle. The French doors to the front terrace have aluminium frames and are not original. The same roof line and wall details have been continued for the 1995 extension.</td>
<td>Category 1</td>

</table>
The Foundling Home is predominantly single- storey red brick building with a clay tiled roof. The complex roof over the U-shaped plan form comprises a mix of hipped and gabled forms and feature gablets. Terracotta finials, including a central cross, have been placed at some of the apices and face brick chimneys that widen at the top, punctuate the roof forms. The roof pitch is lower over the verandah around the outer edge of the building. The Foundling Home is representative of the Federation Queen Anne style displaying some complexity in the decorative elements of the roof and timberwork.

A verandah wraps around the south (front) elevation of the building but has been enclosed at the southeast corner and along the east elevation. The concrete verandah floor is approximately at ground level adjacent to the car park along the western edge but the fall in the site reveals a base of coursed, squared rubble limestone beneath floor level on the east side of the building.

The principal entrance to the place is located centrally in the south elevation and is defined by gables in the verandah roof and main roof form above. Both these gables exhibit a half-timber effect in the infill. In addition, a plaque reading ‘St Vincent’s Foundling Home’ is evident beneath the main gable. The verandah timberwork is moderately elaborate with curved brackets and carved panels fixed to the square timber posts supporting the roof. The close spacing of the exposed rafter ends, apparent beneath the eave profile gutter, establishes a frieze which with the contrasting colour of the paintwork accentuates the decorative effect. A metal balustrade spanning between the posts has been introduced. The square panels of the eaves, between the grouped posts at the corners, appear to have a carved timber ‘S’ imposed over a hollow ‘M’. This refers to SIHS (Greek meaning Jesus Christ Son of God & Saviour) and HIS (Latin meaning Jesus Saviour of men).

Walls of the building have been constructed in red, colonial bond face brickwork with a contrasting cream mortar. Bands of cream render are evident at window sill and head height and also in the outer gablets in the roof above. Vertical strips in the brickwork of these gablets infill allow ventilation to the roof space. The infill of the west gable is supported on a frieze of brick corbels. Other brickwork bonds are apparent around the building providing evidence of different periods of construction.

A Foundation Plaque laid on 10 September 1914 identifying the architect and contractor is located on the south face of the exturding west gable of the building. Windows and doors are principally of timber construction. Many of the openings exhibit an unusual form of ‘Lifting Window’ with sliding glazed upper sashes and a three paneled timber sash below. Large windows prominent in the south and west elevations are composed of narrow panes in timber frames between masonry mullions and exhibit rendered quoining. Sliding aluminium windows are located in the area where the verandah has been enclosed.

The following statement is taken from the State Register Entry for the place.

Catherine McAuley Centre, comprising Benedictine Stables (fmr) (c1858, 1890s, 1990s); Olive Trees (c1858); Cemetery (1891–1913); Old School (fmr) (c1900); former Laundry (c1910); St Vincent’s Foundling Home (fmr) which includes the Foundling Home (1914, 1918, 1950s, 1994), Kindergarten (1925, 1971, 1994) and Nursery (1928, 1970, 1994); and, St Gerard’s Hospital (fmr) (1938), has cultural heritage significance for the following reasons:

- The Benedictine Stables (fmr) has rarity value as it is one of few agrarian buildings dating from the 1850s still in existence in the metropolitan area and is the only remaining structure from the early Benedictine occupation of the site;
- The various elements illustrate the evolution of the site from an agrarian beginning, with stables and olive groves, to a facility dealing with the needs of urban family life, and reflect the rapid development and changing social environment of Perth and Western Australia, since the 1850s;
- The place contributes to the aesthetic qualities of the landscape particularly through the Old School, which has landmark value when approached from the south entrance of the site and provides a focus for the historic group of buildings at the place. St Vincent’s Foundling Home (fmr) contains decorative timber work, terracotta finials and brickwork with render banding;
- the various elements of the place contribute to the community’s sense of place;
- the Benedictine Stables (fmr) and Olive Trees are evidence of the Catholic Benedictine Order who occupied the site from 1852 to 1864, and also with Bishop Sega, under whose authority the site was developed. The Old School is a reminder of the ongoing religious associations of the site;
- St Vincent’s Foundling Home (fmr) and Old Chapel are evidence of the work of the Sisters of Mercy, and the services to children in need which they have provided on the site since 1876;
- the Benedictine Stables (fmr) and Olive Trees are a reminder of the olive oil industry conducted by the Sisters of Mercy, and which helped provide funds for the ongoing operation of the orphanage and foundling home. The olive oil manufactured at St Joseph’s Orphanage won first prize at several Royal Perth shows;
- the place is illustrative of the institutional approach to the care and training of children which prevailed in the late 19th century and into the first six decades of the 20th century; and,
- when opened in 1925, the Kindergarten was one of the first to use the Montessori teaching method and aspects of design in Western Australia. The nursery still displays the ventilated and mosquito proofed verandah, which was considered modern at the time of construction.

<td>Area bound by Lake Monger Drive, Gregory Street, Dodd Street and Mitchell Freeway</td>
<td>Wembley</td>
<td>Lake Monger is a large urban wetland located to the north of West Leederville and bordered by Lake Monger Drive to the south and the Mitchell Freeway to the north east side of the lake. The Reserve totals 70 hectares which is predominantly occupied by the lake. Additional facilities include a walk trail around the lake, sporting facilities, visitor facilities and children’s play area. The lake is surrounded by flora and fauna, with a walk through the conservation area with boardwalks and lookouts across the lake. The south foreshore and the west side of the lake provide a grassy contrast to the lake and dense plantings along the north eastern side of the lake. The Lake Monger Recreational Club and Wembley Bowling Club buildings within the grounds are representative of the post war period.</td>

</tbody>
</table>
The façade has two elevations. Both facades are enlivened by rendered elements, painted in bright white, including pilasters, fascias, pediments, window sills and decorative motifs. Both buildings are of similar design, each incorporating a central entrance flanked by rendered pillars and has the word 'HALL' above the entry. The entry to the second hall, which is set back behind the main building, is of similar design albeit the actual entrance doors are to the rear of the covered entry which is secured by metal gates, this entrance is not as ornate as the main entrance but the similarity of design can be seen in the two. Windows are timber framed to both buildings. Brick additions have been added to both buildings but these cannot be seen in the street view. The roofs to the halls are both hipped with gablets to the street elevation, both obscured from clear view at street level due to the parapet walls across the facades. The roofs are clad in a green/grey Colorbond.

The bowling club is located to the rear of the War Memorial Gardens. The clubhouse, the 1955 addition to the rear of the bowling clubrooms, the 1955 addition to the rear of the hall, and the landscape treatments are immediately around the west, north and east sides of the hall are of little significance. The hard landscaped area in front of the hall is intrusive.

The following statement is taken from the State Register Entry for the place.

Leederville Town Hall & Recreation Complex, a pair of single storey classically planned face brickwork, stucco walls and Colorbond custom orb roof buildings in the Federation Free Classical style, together with a rough hewn granite obelisk memorial with sculpted marble lions, memorial rose garden, bowling greens, and mature trees and setting, has cultural heritage significance for the following reasons:

- the place is a fine example of two successive buildings designed in the Federation Free Classical Style architecture;
- the bowling greens, established in 1906, are one of the oldest bowling greens in Western Australia still operating on their original site;
- the place was designed by A. E. Clarke, a prominent architect in Victoria and Western Australia, and built by well-known local builder, W. H. Roberts;
- the place has social value to the community of the immediate district of West Leederville, and the wider community, through its continuous use since 1904;
- the place is a civic landmark in the largely residential environment of West Leederville, and the palms flanking the monument are a distinctive element in the vicinity;
- the Leederville War Memorial was designed by Pietro Porcelli, the first local sculptor in Western Australia to be noted for public artwork; and,
- the place is representative of the development and rapid growth of Leederville in the pre-World War One period; and marks a phase in the establishment of municipal buildings in the suburb.

The bowling clubrooms, the 1955 addition to the rear of the bowling clubrooms, the 1955 addition to the rear of the hall, and the landscape treatments are immediately around the west, north and east sides of the hall are of little significance. | 111          | West Leederville Primary School           | 58        | Northwood Street | West Leederville | Although the school has increased, the original sections of the building which faces both Northwood Street and Woolwich Street remain in a largely authentic manner and has been little altered externally. The place is of brick construction with a rendered band detail extending around the buildings at sill level and at plinth level. The windows are largely timber framed sash windows with timber and iron awnings. Both the roofs and the window awnings have been reclad. The roofs are mid-pitch gables with fibro cladding to the apex of the gable and battened eaves. The roofs are enlivened by tall brick corbelled chimneys. The two ranges to Northwood Street and Woolwich Street both incorporate covered entrances with gabled canopies supported on timber posts, timbered gable detail and the school logo. Further sections of the original school cannot be seen from the road albeit the timbered elements of the gables stand above the ridge line of the front ranges. | The following statement is taken from the State Register Entry for the place. West Leederville Primary School, a brick and iron primary school in the Federation Arts and Crafts style, together with a collection of buildings comprising shelter sheds, pavilion classroom, pre-primary, toilet block, covered area, transportable classroom, kindergarten, covered sand pit, and gardener's store, in an open bitumen paved and grassed setting, has cultural heritage significance for the following reasons:  
• the place is a fine example of a Federation Arts and Crafts style school building, with a very fine school hall and well-crafted construction, in a pleasant and leafy landscaped setting;  
• the place illustrates the use and flexibility of standard Public Works Department designs for schools as practised in Western Australia in the late nineteenth and early twentieth centuries, along with the subsequent adaptations to those designs through the twentieth century as educational practices evolved;  
• the place makes a positive contribution to its suburban context of mostly Federation period houses and commercial buildings, which extends through a large area of West Leederville;  
• the place reflects rapid growth in the gold boom period and early twentieth century, and, in the post-World War Two period, the influx of migrants from a wide range of ethnic backgrounds;  
• the main building derives from a standard design, introduced under George Temple Poole as Assistant-Engineer in Chief (1892-1896) of the Public Works Department when standard planning was developed as a means of managing rapid expansion and producing efficiency;  
• the pavilion classroom (1915) is rare as an example of its type and for the fact that it is retained on its original site, with few later changes; and,  
• the timber construction shelter sheds (1908) are the only surviving buildings on site that were constructed in the early 1900s. The brick construction toilet block, bricks tore, and kindergarten, covered sandpit and gardener's store have little cultural heritage significance. | Category 1 |
| 116          | Chapel of St Michael the Archangel        | 50        | Ruldip Street | West Leederville | The church is one of an impressive precinct of striking buildings set within a landscaped setting in the heart of residential West Leederville. The buildings are set atop a grassy bank, with views up a central driveway from McCourt Street towards the building. The church is located on the eastern side of the land parcel and is linked to the main building (former convent and now administration centre) by a colonnaded walkway. The church was constructed in the inter-war era and expresses gothic design influences including the tall lancet windows, the verticality of the building and the buttresses with pinnacles. The church is of similar stonework as the main building and laid in a distinctive bond. The lancet windows contain stained leaded glazing with the main windows positioned above the doorways to the south and west elevations. The east elevation takes on a different character than the principal façade and consists of three faceted towers, reminiscent of European castle architecture. The roof is shallow pitched to the main roof, clad with terracotta tiles. The north face of clubrooms, the 1955 addition to the rear of the hall, and the landscape treatments immediately around the west, north and east sides of the hall are of little significance. The hard landscaped area in front of the hall is intrusive. | The place is of brick construction with a rendered band detail extending around the buildings at sill level and at plinth level. The windows are largely timber framed sash windows with timber and iron awnings. Both the roofs and the window awnings have been reclad. The roofs are mid-pitch gables with fibro cladding to the apex of the gable and battened eaves. The roofs are enlivened by tall brick corbelled chimneys. The two ranges to Northwood Street and Woolwich Street both incorporate covered entrances with gabled canopies supported on timber posts, timbered gable detail and the school logo. Further sections of the original school cannot be seen from the road albeit the timbered elements of the gables stand above the ridge line of the front ranges. | Category 1 |
the church presents with ashlar stonework creating a contrasting smooth aesthetic to the other elevations. The details remain the same with a regular rhythm of buttresses and windows to both elevations. No internal inspection of the chapel was undertaken at the time of assessment.

### 117 Ruislip Street Catholic Precinct 50 Ruislip Street West Leederville

Impressive precinct of striking buildings set within a landscaped setting in the heart of residential West Leederville. The buildings are set atop a grassy bank, with views up a central driveway from McCourt Street towards the building.

The main building is a three storey Federation Romanesque limestone structure of symmetrical plan form with a central entrance, flanking wings, colonnaded verandah and balcony across the entire façade. The third storey accommodation is within the roof space with a regular rhythm of dormer windows across the roofscape. The roof is a combination of gables and hips clad in terracotta tiles and further enlivened by a series of tall chimneys with rendered bands, caps and flues. The colonnades to the verandah and balcony are identical, each section containing six arched openings. The verandah is open to the stone deck whilst the balcony has a stone balustrade. The flanking wings both contain faceted bays to the ground floor and a window ensemble contained within an arched opening to the upper level. The side and rear (north) elevations are of brick construction. The addition to the west of the main building was constructed in the 1960s and is not of significance.

The church was constructed in the inter-war era and expresses gothic design influences including the tall lancet windows, the verticality of the building and the buttresses with pinnacles. The church is of similar stonework to the main building and laid in a distinctive bond. The lancet windows contain stained leaded glazing with the main windows positioned above the doorways to the south and west elevations. The east elevation takes on a different character than the principal façade and consists of three faceted towers, reminiscent of European castle architecture. The roof is shallow pitched to the main roof, clad with terracotta tiles. The north face of the church presents with ashlar stonework creating a contrasting smooth aesthetic to the other elevations. The details remain the same with a regular rhythm of buttresses and windows to both elevations.

The site has undergone extensive alterations to the north of the main building (former convent) in the late 1980s - early 1990s where all the development to the north of the site was cleared and has gradually been redeveloped with residential developments which have little impact on the setting of the Catholic Education Centre.

### 1 Maxwell House 3 Asten Road City Beach

A distinctive single storey house with gently sloping skillion roofline across the full width of the façade. As with all Iwanoff Houses, Maxwell House presents with a unique and distinctive frontage incorporating decorative concrete panels. In this instance, the panel is perforated concrete creating a projecting screen over the façade of the house. The entrance is located in a recessed position in the centre of the façade consisting of single panel door with large adjacent window.

### 5 South City Challenger City Beach

The organic form of the two remaining kiosks forms a distinctive element of the)...

</table>
The Happy Tree is a large multi-trunked Tuart tree located on the verge outside no. 9 Hovea Crescent. The natural nooks in the tree have been filled with toys, supplemented by platforms and steps with other creatures and fantasy figures attached all around the tree. A commemorative plaque celebrating the Happy Tree has been erected alongside a plaque from its creator, Ralph Soderlund states “The Happy Tree stands tall and free, a gift from God for all to see, its happiness is there to share, take same to others to show you care”.

**Bald Park**

Bald Park is an extensive area of natural environment, parklands and bush totalling 437 hectares and is the largest remaining bushland within the urban area of the Swan Coastal Plain. The main area of Bald Park is bound by Oceanic Drive, Perry Lakes Drive, Rochdale Road and West Coast Highway. The portion of land to the south of Rochdale Road extending from McClemans Road to the City Beach coastline can be considered part of the original landholding as its physical form, fauna and flora are consistent with Bald Park. A further section of Bald Park is found to the north of Oceanic Drive and bordered by Bald Park Drive, The Boulevard to the north and Kalinda Drive (not including the International School site or the Town of Cambridge Administration Centre).

The park contains a number of features including Camel Lake, Pine Plantation, Reabold Hill and various heritage trails and nature walks and together with a number of lookouts providing long views across the City and out towards the Indian Ocean. The park also contains Perry House built in the early 1900s for the caretaker of the park.

The parcel of land south of Rochdale Road is more informal in nature with no facilities such as graded paths or signage.

**St Christopher’s Anglican Church and Rectory**

St Christopher’s Anglican Church is set back from Templetonia Crescent, on top of a grassy embankment and partially obscured from clear view by a brick wall and trees. Due to the layout of the area, the church has an angled relationship with Templetonia Crescent.

The building is single storey to the principal façade and is of brick construction painted white. The entrance is set behind a small section of covered driveway. The presentation is simple, reflective of the era of development and contains sections of brickwork.

<td>The Happy Tree is a large multi-trunked Tuart tree located on the verge outside no. 9 Hovea Crescent. The natural nooks in the tree have been filled with toys, supplemented by platforms and steps with other creatures and fantasy figures attached all around the tree. A commemorative plaque celebrating the Happy Tree has been erected alongside a plaque from its creator, Ralph Soderlund states “The Happy Tree stands tall and free, a gift from God for all to see, its happiness is there to share, take same to others to show you care”.</td>
<td>The place has social value as the house and others of Iwanoff’s design are the source of study and interest amongst members of the community. The Happy Tree has aesthetic value as a mature and well established Tuart tree which has been adorned with carved characters. The Happy Tree has aesthetic value as a landmark in the street and the community for its contribution and continuity in the streetscape since 1978. The Happy Tree has historic value for its association with the development of the City Beach community in the 1970s when the first characters were added to the tree. The Happy Tree has historic value for its association with Ralph and Ivy Soderlund who lived at this house from 1961 until the 2000s and for their contribution to the community in creating the tree carvings and the associated books and annual story telling event. The Happy Tree has social value for the members of the City Beach community who have attended storytelling events at the tree since 1978 and for its contribution to the sense of place.</td>

<td>City Beach</td>
<td>Bold Park is an extensive area of natural environment, parklands and bush totalling 437 hectares and is the largest remaining bushland within the urban area of the Swan Coastal Plain. The main area of Bold Park is bound by Oceanic Drive, Perry Lakes Drive, Rochdale Road and West Coast Highway. The portion of land to the south of Rochdale Road extending from McClemans Road to the City Beach coastline can be considered part of the original landholding as its physical form, fauna and flora are consistent with Bold Park. A further section of Bold Park is found to the north of Oceanic Drive and bordered by Bold Park Drive, The Boulevard to the north and Kalinda Drive (not including the International School site or the Town of Cambridge Administration Centre). The park contains a number of features including Camel Lake, Pine Plantation, Reabold Hill and various heritage trails and nature walks and together with a number of lookouts providing long views across the City and out towards the Indian Ocean. The park also contains Perry House built in the early 1900s for the caretaker of the park. The parcel of land south of Rochdale Road is more informal in nature with no facilities such as graded paths or signage.</td>
<td>The place has aesthetic value as a large well maintained parkland within a suburban setting that is accessible to the community. The place has historic value as a remnant of the coastal bushland in the metropolitan area that has remained intact since the early 19th century. The place has historic value for its associations with prominent settlers Walter Padbury, Henry Trigg and Joseph Perry, who were significant figures in the early development of Western Australia. The place has historic value for its association with William Ernest Bold who was an influential leader in the City of Perth who shaped the development of this portion of the Town of Cambridge in the early 20th century. The place has research value as the largest remaining bushland remnant in the urban area of the Swan Coastal Plain. The tuart-banksia woodlands and limestone heaths support a number of habitats for wildlife. The place has social value for the members of the community who access the place for passive recreation and research. The place has social value as demonstrated by the formation of the Friends of Bald Park Bushland Inc, a community group dedicated to the ongoing care and maintenance of the park.</td>

<td>St Nicholas’ Anglican Church</td>
<td>45</td>
<td>Berkeley Crescent</td>
<td>Floreat</td>
<td>The group of three buildings have a split presentation with the church and rectory being orientated towards Berkeley Street and the Hall orientated towards The Boulevard. The church was constructed in 1962 and is considered to form part of the Late Twentieth Century Ecclesiastical style, and is quite simple in its presentation. The structure benefits from a traditional vertical emphasis. The place is of brick construction with a tiled roof. A free standing tower is located to the front of the north west corner of the church. The stained glass windows are located around the building, many of which extend to the eaves, and are principally strip windows in a blank brick elevation. The north elevation to Berkeley Street consists of an asymmetric plan with one of the entries accommodated in the north wing and a second through the lower level. The hall and rectory are of a standard late 20th century construction form and detail.</td>
<td>The place has aesthetic value as a good intact example of the post war international style executed in brick and tile featuring stained glass and original internal features. The church has aesthetic value as a landmark in the street and district. The place has historic value for its association with the development of Floreat Park in the 1950s and 1960s and with the acceleration of settlement following the Empire/Commonwealth Games in 1962. The place has historic value for its identification with the sportsmen and women which reflected the enthusiasm for sports in the early 1960s when Perth held the Commonwealth Games. The place has social value for the members of the community who have attended the place for social and religious occasions since 1962.</td>

<td>Floreat Park Primary School</td>
<td>38</td>
<td>Chandler Avenue West</td>
<td>Floreat</td>
<td>Floreat Park Primary School is located to the west of Howtree Place and south of The Boulevard, two of the main roads running through the suburb. The school is of traditional design displaying many features of academic architecture of the 1950s including brick and rendered construction with terracotta tiled roofs. The school is mainly single storey though sections of the buildings do incorporate a lower level to take account of the changing land levels across the site. The lower sections of the elevations are faced brick with the upper sections rendered. Windows are multi-paned timber framed sash openings. The roofs are tiled with palm trees, and it is unknown whether the traditional fireplaces still remain extant inside the class rooms. The school is arranged in a series of ranges around an enclosed court yard, new development has occurred to the north western corner of the site and the oval/sports field is located to the west of the main school buildings.</td>
<td>The place has aesthetic value as an intact example of a Post World War II complex of educational buildings that feature the style and detail of the period. The place has historic significance for its association with the settlement of Floreat and the provision of education to the community of Floreat Park. The place has social value for the members of the local community, particularly past students and staff who attended the school.</td>

<tr>
<td>40</td>
<td>St Cecilia’s Roman Catholic Church</td>
<td>47</td>
<td>Peebles Road</td>
<td>Floreat</td>
<td>The early 1960s church is of concrete panel construction with a distinctive glazed façade incorporating large panes of coloured glass. The church comes under the late 20th century ecclesiastical architectural design where traditional church design gave way to a more flexible design approach that was reflective of changing liturgical practices. St Cecilia’s is a five sided building with each face incorporating a shallow pitched gable roof creating a dynamic roofline resulting in a landmark building in the streetscape. The roof is clad in colorbond with skylights along the ridgeline of the western roof section. The principal façade is positioned at a slight angle facing the intersection of Grantham Street and Kenmore Crescent. The façade consists of three main bays of intersection glass and concrete panels flanked by angled glazed and concrete walls. The remaining elevations are a mix of plain concrete panelled walls and glazed and concrete panels walls. There is an element of transparency through the building courtesy of the abundance of windows. The church adjoins the Newman College site and is surrounded by both hard and soft landscaping.</td>
<td>The place has aesthetic value as an intact example of the Late 20th Century Ecclesiastical style and as a landmark in the streetscape. The place has historic value for its association with prominent architect, Raymond Jones who was influential in Western Australian practice for his non-traditional approach to design and materials. The place has historic value for its association with the early 1960s which was characterised as a period of affluence which was teamed with a willingness to experiment with new styles and materials. The church complex has social value for the members of the Floreat and wider metropolitan community who have attended the venue for social, religious and musical events since 1961.</td>

<td>Wembley Hotel</td>
<td>344</td>
<td>Cambridge Street</td>
<td>Wembley</td>
<td>Substantial rendered brick and tile building constructed in an &quot;L&quot; shape with dual frontages to Cambridge Street and Alexander Street. A drive through bottle shop has been constructed at the western end of the building, presenting with the same detailing as the main hotel. The façade is divided into a series of bays with feature gable sections to both elevations and a main corner entrance that has become obscured by trees. This entrance no longer has direct access from the street due to the construction of a boundary wall around the garden area. The ground level bays to Cambridge Street provide service access for deliveries with flush shutter doors whilst the upper bays were once hotel accommodation with direct access to the balcony that wraps around the façade. The bays to the Alexander Street elevation presents in a more traditional manner with both the ground and upper level elevation being recessed behind the verandah and balcony. The ground floor level is part of the public bar/restaurant area. Whereas the Cambridge Street elevation has been painted in muted tones with all traces of the face brickwork being obscured, the Alexander Street elevation has retained the brickwork providing a contrast with the rendered gables, fascia and upper level elevation. Other materials include timber balustrade to the balcony with square timber posts, open eaves, terracotta tiled roofs with corbelled brick chimneys, and timber framed windows. The place has undergone alteration but still clearly reflects the design intent of the place.</td>
<td>The place has historic value for its association with the development of Wembley in the 1930s. The place has landmark value in Wembley and the Cambridge Streetscape as a prominent feature since 1932. The place has historic value for its association with the development of Wembley in the 1930s. The place has forensic value for its association with prominent local architect, Edgar Le B Henderson, builders Snook and Sons and owners, the Cranley family. The place has social value to the community as a place of gathering for many social and formal events since the 1930s.</td>

| 108 | Leederville Fire Station No.3 (fmr) | 2 | McCourt Street | West Leederville | The former fire station is a two storey brick and tile building that has been adapted for commercial use whilst retaining the original fire station aesthetic. The bi-fold doors remain at ground level which originally provided access for the fire engines. The residence/fire officer accommodation on the upper level was recessed to allow for a balcony. Pedestrian access was via a single door in the main elevation. The building is of simple design with rendered detailing breaking up the red brick. A deep verandah canopy projects out above all access points at ground level. The balustrade to the upper level balcony and upper courses of the elevation are also rendered. All windows are timber framed sashes and the doors leading to the upper verandah are French doors with glazed fanlights. Theipped roof gables have decorative finials. | • the place has aesthetic value as a good example of well-designed service building demonstrating the Inter War Arts and Crafts style.  
• The place has historic value for its association with the development of the Leederville community in the 1920s and the recognition of this growth through the provision of fire brigade services.  
• The place has historic value for its demonstration of the significance of fire stations to local communities and the government support provided for this service.  
• The place has research value for its demonstration of the scale and form of fire stations in the Inter War period although the interior has been altered the exterior remains largely intact.  
• The former Fire Station has historic and social value as an important gallery for the art community in Perth during the 1970s. | Category 2 |
| 118 | Residence, 17 Tate Street | 17 | Tate Street | West Leederville | Two storey Federation style townhouse of brick and timber construction. The brickwork has been finished with luck-pointing to both levels of the façade and also incorporates a combined rendered string course/window sill at ground level. The gable has been finished with roughcast render and battening and contains a date stone ‘1909’. The windows are timber framed 1 over 1 sash windows. The main entrance door is positioned towards the northern edge of the frontage and consists of timber and glass panelled door, matching side light and glazed fanlight. All glazing to the entrance is stained leaded glass. The balcony/verandah structure is of timber construction with timber balustrade to the upper level balcony and simple timber frieze to both levels. The northern end of the balcony/verandah is rendered brick to both levels but is a feature which is not replicated at the southern end. The roof to the balcony is a skillion positioned below the gable feature. | • the place has aesthetic value as a rare and intact example of a two storey brick and iron residence built in the early 20th century.  
• The place has aesthetic value as a landmark in the streetscape as it is a rare two structure until the construction of the adjacent two storey residence in the late 1990s.  
• The place has historic value for its association with the settlement and development of this portion of West Leederville in the early 20th century for working families.  
• The place has historic value for its association with how extended families lived together during the early 20th century.  
• The place has social value as a demonstration of the type of home built for large extended families which were later adapted as separate residences. | Category 2 |
| 119 | St Barnabas Anglican Church | 104 | Woolwich Street | West Leederville | Gothic inspired red brick church with a strong vertical emphasis. The east and west elevations contain large tracery arch windows with leaded lights. A further large window can be found on the north elevation, consisting of three separate arched windows underneath a cement window drip mould. Smaller lancet arched windows can be found around the remainder of the church. The main entry is via the west elevation. A cross has been designed into the north elevation by using egg crate air vents. The buttresses to the north elevation have rendered capping, a feature which continues across the top of all the gable parapets. | • The church has aesthetic value for its form and remaining detail of the Federation Gothic Style executed in brick and timber.  
• The church has historic value for its association with the establishment and development of the Leederville community in the early 20th century.  
• The church has historic value for its association with the Anglican community which has been present at this site since 1917.  
• The place has social value for the many members of the community who have attended religious or social events at this venue throughout the 20th and 21st century. | Category 2 |

| 4            | Kapinara Primary School   | 2         | Catesby Street    | City Beach | Kapinara Primary School is a single and double storey brick and Colorbond school positioned in the south western corner of a large site which includes an oval and hard courts, surrounded by peripheral planting. The main entrance is along Catesby Street to the south, which is set at a slightly lower level than the road. The car park entrance is to the west. The school is of brick construction, divided into a regular rhythm of bays, each with aluminium framed windows. The presents with a traditional academic aesthetic and has a simple utilitarian presentation. The school is arranged in ranges, each interconnecting with each other and forming a series of quads and semi-enclosed spaces. | - The place has aesthetic value as a largely intact example of a late 20th century complex of educational buildings that feature the style and detail of the period.  
- The place has historic significance representing the history of settlement of the local area and also the provision of education to the new community in City Beach and Wembley Downs.  
- The place has social value for the members of the local community, particularly past students and staff who attended the school. | Category 3 |
| 6            | Floreat Beach and Groyne  |           | Challenger Parade | City Beach | Extensive area of beach with dunes, native vegetation and landscaping. The area of beach between Floreat and City Beach is connected not only by the beach but through purpose built boardwalks and coastal paths. The dunes and natural vegetation aesthetic is interspersed with formal landscaping of lawned areas and plantings softening the hard landscaping of the carparks. Facilities include kiosks, surf clubrooms, restaurants, picnic and BBQ areas and children’s play areas. | - Floreat Beach has aesthetic value as a large stretch of beach and foreshore that is well maintained and in good condition.  
- The place has historic value for its association with the establishment and development of the adjacent suburb of City Beach from a holiday destination in the 1920s to its development in the 1960s as part of the greater metropolitan area.  
- The place has historic value for its demonstration of the evolution in the development of public facilities with the remaining kiosk the earliest structure on the site through to contemporary structures.  
- The groyne has potential research value as they demonstrate methods of construction in the mid-20th century which may prove instructive to future projects.  
- The place has social value for many members of the community from the Town of Cambridge and the wider Perth metropolitan area who have visited the beach for formal and informal recreation. | Category 3 |
| 13           | House, 17 Hovea Crescent  | 17        | Hovea Crescent   | City Beach | An Art Deco two storey house of rendered brick construction. The house has a dual relationship with the angled entrance facing the intersection of both Elimatta Way and Hovea Crescent. The south east elevation facing Elimatta Way incorporates curved elements with glass block openings, a small balcony above the entrance and tall windows. The Hovea Crescent elevation is more angular in its presentation with a single storey north section abutting the two storey main section of the house. The two storey elements contain a recessed upper section with balcony incorporating a shallow curved canopy supported on masonry columns and positioned beneath a tiered parapet. The distinguished block decoration around the top of the parapet has been continued on the single storey section. All the windows have been replaced. The house is situated approximately in the middle of the lot with open gardens to the front. | - The place has aesthetic value as a good intact example of the style and detail of an Inter War Functionalist style.  
- The place has aesthetic value as a landmark in the street for its rare form and its continuity of presence from the 1940s.  
- The place has historic value for its association with the early development of this portion of City Beach in the Inter War period.  
- The place has social value as an example of the design and scale of housing for professional families in the Inter war period. | Category 3 |

| 15           | City Beach High School (fmr) | 20        | Kalinda Drive   | City Beach | The school was constructed in the mid-1960s in the natural bushland in City Beach. The low ranges of the school are mainly hidden from clear view of the street behind landscaped gardens along Kalinda Drive. The school buildings are predominantly arranged in a series of east-west ranges with a number of open spaces between each block. The blocks are single and double storey brick construction with pebbledash render in placed and all incorporate shallow pitched Colorbond roofs. Windows are timber framed sashes and highlight windows. The reception block and access into other areas of the school is via a high brick wall with an integrated entrance, the brickwork being enlivened by the aboriginal mural across the full extent of the wall. | • The layout of the campus and the original buildings from the mid-1960s have aesthetic value as they demonstrate the form and style of the period and illustrate a greater sophistication in public buildings when designing for the climate and landscape in Western Australia.  
• The place has historic value as it demonstrates the settlement and rapid growth of City Beach in the 1960s and the government’s response to this new community.  
• The place has social value for the members of the community from the 1966 to present day who attended the school as staff or students, or were associated with those who went there. | Category 3 |
| 18           | City Beach Primary School | 30        | Manapana Road   | City Beach | The school is located on a corner plot, at a lower level than the surrounding roads. The school comprises a range of buildings of single storey construction which have been added to as demand for the school increased. The school is of brick construction with a shallow pitch Colorbond roof. A feature parapet wall of painted brick construction with “City Beach Primary School” emblazoned across it creates the entry statement of the school. The school is of face brick and painted brick construction with timber framed windows, deep overhang of the roof providing some shade to the windows and additional shade structures positioned midway up some of the windows. The school is located amidst an open green setting with trees and other planting, softening the utilitarian appearance of the school and helping it blend in with the residential character of the area. The three main ranges of the school are similar in their presentation and are arranged around the netball courts to the rear of the buildings. | • The place has aesthetic value for the remaining form and detail of a mid-20th century complex of educational buildings which continues to evolve and represent subsequent styles.  
• The place has historic significance representing the history of settlement of City Beach in the period following World War II and the rapid population growth in the 1960s.  
• The place has social value for the members of the local community, particularly past students and staff who attended the school. | Category 3 |
| 19           | Ryan Residence (fmr)      | 14        | Marimba Crescent | City Beach | Elevated single storey red/brown brick house with shallow pitched roof. The façade is a combination of brick panels and full height windows, arranged in groups of two or three. The entrance is set back behind the main building line creating a small porch area. The entrance includes timber door with full height side window and single pane fanlight extending across both elements. A paved verandah extends around part of the façade with brick retaining wall and is accessed via a flight of brick steps from the parking area/driveway. | • The place has aesthetic value as an intact and good representative example of the Late 20th Century Sydney Regional style in its original landscaped setting.  
• The place has historic value for its association with the development of City Beach in the 1960s which saw many families settling in the area.  
• The place has historic value as an example of the period in the 1960s when there was considerable experimentation with traditional design principles that were being expressed in many areas, including architecture.  
• The place has historic value for its association with architect Noel Ryan who designed this residence for his family. | Category 3 |
| 20           | Booth House               | 59        | Oban Road       | City Beach | Single storey house characterised by a flat roof, a façade with full height windows and concrete block construction. The original open carport has been enclosed and part of the open porch has been enclosed by windows altering the design intent of the façade. | • The place has aesthetic value as an intact example of the late 20th century International style.  
• This residence and other examples of Iwanoff's work are a comprehensive and notable group of buildings which demonstrate a specific design style and period.  
• The place has historic value for its association with prominent architect, Iwan Iwanoff who was influential in Western Australian practice for his non-traditional approach to design and materials drawn from European trends.  
• The place has historic value for its association with the early 1970s which was characterised as a period of affluence which was teamed with a willingness to experiment with new styles and materials.  
• The place has social value as the house and others of Iwanoff's design are the source of study and interest amongst members of the | Category 3 |
The two groynes, South City Beach Kiosk and Challenger Parade roughly define the boundaries of City Beach. The dunes and natural vegetation aesthetic is interspersed with formal landscaping of lawn areas and plantings softening the hard landscaping of the carparks. Facilities include the restaurants, South City Beach Kiosk, City of Perth Surf Life Saving Club and volleyball courts, picnic and BBQ areas and children’s play areas.

Located on the City Beach groyne, the lookout tower is a simple form comprising a slender steel column with ladder leading to an octagonal lookout shelter that provides 360 degree visual access.

The Matthews Netball Centre has been home to netball since 1961 however the original building no longer exists. This site is now the location of the State Netball Centre, managed by the State Government, the Matthews Netball Centre and managed by the Town of Cambridge, and 49 outdoor netball courts (38 hardstand and 11 turf). The new Matthews Netball Centre facilities opened in 2013, with the State Netball Centre official opening in 2015.

The place has historic value for its association with prominent architect, Raymond Jones who was influential in Western Australian practice for his non-traditional approach to design and materials.

The place has social value for its association with prominent architects in Western Australia during the 1960s and 1970s; Paul Ritter and Tony Brand;

The groyne has potential research value as they demonstrate methods of construction in the mid-20th century which may prove instructive to future projects;

The place has social value for many members of the community from the Town of Cambridge and the wider Perth metropolitan area who have visited the beach for formal and informal recreation.

The place has social value for many members of the community from the Town of Cambridge and the wider Perth metropolitan area who have attended the place since 1961 as players, spectators or officials. The widespread popularity of the game has meant a significant portion of the Perth and wider Western Australian community have

| 22           | City Beach, Groyne and Lookout Tower | Challenger Parade | City Beach | Extensive area of beach with dunes, native vegetation and landscaping. Boardwalks and coastal paths are located in the sand dunes connecting City Beach with the beaches to the north and south. The two groynes, South City Beach Kiosk and Challenger Parade roughly define the boundaries of City Beach. The dunes and natural vegetation aesthetic is interspersed with formal landscaping of lawn areas and plantings softening the hard landscaping of the carparks. Facilities include the restaurants, South City Beach Kiosk, City of Perth Surf Life Saving Club and volleyball courts, picnic and BBQ areas and children’s play areas. Located on the City Beach groyne, the lookout tower is a simple form comprising a slender steel column with ladder leading to an octagonal lookout shelter that provides 360 degree visual access. | • City Beach has aesthetic value as a large stretch of beach and foreshore that is well maintained and in good condition.  
  • The place has historic value for its association with the establishment and development of the suburb of City Beach from a holiday destination in the 1920s to being part of the wider Perth metropolitan area.  
  • The place has historic value for its demonstration of the evolution in the development of public facilities with the remaining kiosk the earliest structures on the site through to contemporary structures completed in 2016. The place has historic value for its association with prominent architects in Western Australia during the 1960s and 1970s; Paul Ritter and Tony Brand;  
  • The groyne has potential research value as they demonstrate methods of construction in the mid-20th century which may prove instructive to future projects;  
  • The place has social value for many members of the community from the Town of Cambridge and the wider Perth metropolitan area who have visited the beach for formal and informal recreation. | Category 3                                                                 |
| 24           | Lisle House | 9 | Pindari Road | A two storey house situated in an elevated position on the west side of Pindari Road. The house is highly distinctive, constructed in an almost complete donut shape, with a central garden in the void. The house is of painted brick construction with a flat roof, the brick walls enlivened by an abundance of windows that advocated cross ventilation as a natural cooling process. In contrast to the stark white of the main house, the garage is of rock faced stone construction which abuts the main house creating a completely private inner garden behind. The windows are mainly large openings and are a major feature of the aesthetic qualities of the building. The main windows are three panes high and three to four panes wide, occupying great sections of the wall. Shade is provided by a small overhanging canopy. The house is positioned on an elevated site with lawns to the front. | • The place has aesthetic value as an intact example of the late 20th century organic style and as a landmark in the streetscape.  
  • The place has historic value for its association with prominent architect, Raymond Jones who was influential in Western Australian practice for his non-traditional approach to design and materials.  
  • The place has historic value for its association with the early 1970s which was characterised as a period of affluence which was teamed with a willingness to experiment with new styles and materials. | Category 3                                                                 |
| 52           | Matthews Netball Centre | 199 | Salvado Road | The Matthews Netball Centre has been home to netball since 1961 however the original building no longer exists. | 58           | Wembley Theatre and Gardens (fmr)         | 202       | Cambridge Street        | Wembley  | A single storey corner building that has retained much of its original design aesthetic to the facade. The place has a characteristic art deco style parapet with stepped elements and bands that were key elements of the style. The angled section of the facade facing the intersection incorporates a long thin window as well as increased height parapet. As a former cinema, the upper levels of the elevations are mainly blank, with only small windows breaking up the rendered construction. The ground level benefits from a higher degree of activation with a number of shop units and the original entrance to the building. The shop frontages consist of a simple arrangement of large windows with frosted glazing and single glass and timber door. The original entrance has a large window divided into a series of panes in an art deco style arrangement, flanked by entrance doors. An awning extends around the facade. Only the facade is from the original construction. | - The place has aesthetic value for its remnant elements of the Inter War Functionalist style on the Cambridge Street facade and portion of the Station Street facade.  
- The place has historic value for its association with the development of the community in the Inter War period.  
- The place has historic value for its association with the widespread popularity of cinemas in metropolitan Perth in the Inter War period.  
- The place has social value for the members of the community who attended the place as a cinema from 1937 to 1962 and for its later function as a restaurant. | Category 3                           |
| 62           | Commercial Premises, 294 Cambridge Street | 294       | Cambridge Street        | Wembley  | A single storey inter-war commercial building located on the corner of Cambridge Street and Nanson Street. The place consists of three separate units, each presenting in a similar manner tied together by the painted rendered finish and the facade brickwork to the lower section of the shop frontages.                                                                 | - The place has aesthetic value as a good example of an Inter War combined shop and retail premises with original detail.  
- The place has historic value for its association with the development of Wembley in the Inter War period and this section of Cambridge Street which was, and continues to be, a retail hub.  
- The place has social value for its continuity of function as a commercial premises since the 1930s. | Category 3                           |
| 63           | Commercial Premises, 296 Cambridge Street | 296       | Cambridge Street        | Wembley  | A pair of single storey commercial premises located on the western corner of Nanson Street and Cambridge Street. The units are of painted brick construction below the owning and rendered masonry above to the plain parapet wall. The corner unit has an angled entrance with timber framed glass double doors and taking windows with a large shop window to Cambridge Street. The fanlights above have been boarded up. The adjoining shop has replaced the windows and doors but still presents in a semi-traditional manner with full height windows to the awning. The fanlight above the double entrance remains albeit not original. A boxed awning extends across the full extent of both retail units. | - The place has aesthetic value as an example of an Inter War combined shop and retail premises with original detail.  
- The place has historic value for its association with the development of Wembley in the Inter War period and this section of Cambridge Street which was, and continues to be, a retail hub.  
- The place has social value for its continuity of function as a commercial premises since the 1930s. | Category 3                           |
| 65           | Residence, 316 Cambridge Street           | 316       | Cambridge Street        | Wembley  | Inter-war weatherboard cottage of asymmetrical plan form. The projecting section of the facade contains a three sectioned bay window with timber framed sashes and weatherboard cladding above and below the window. The gable above has roughcast render with timber batten detailing and turned timber finial. The recessed section of the house contains a further three section timber framed window with sashes and the main entrance which has fanlight and sidelights. The high hipped and gabled roof together with the bullnose verandah canopy have been reclad with colorbond. The verandah also contains non-original decorative brackets and frieze. The balustrade is rendered masonry. A tall brick chimney with elaborate corbeling is positioned on the west side of the roof behind the gable. | - The place has aesthetic value as an example of an Inter War residence with original detail.  
- The place has historic value for its association with the development of Wembley in the Inter War period.  
- The place has social value for its demonstration of the form and scale of housing in the Inter War period. | Category 3                           |
| 66           | Commercial Premises, 318 Cambridge Street | 318       | Cambridge Street        | Wembley  | This entry relates only to the former residence on Strata Lot 1. A single storey brick and tiled inter-war residence that has been extended along the eastern side of the house and converted for non-commercial use. The brickwork has been painted and possibly rendered to the lower sections of the facade. Some original windows have been retained and where they have been replaced, the openings have not been enlarged. Both original and non-original. | - The place has aesthetic value as an example of an Inter War residence with original detail.  
- The place has historic value for its association with the development of Wembley in the Inter War period.  
- The place has social value for its demonstration of the practice of combining a residence with professional rooms. | Category 3                           |

| 69           | 342  | Cambridge Street | 332          | Wembley   | 332 Cambridge Street consists of three shops attached to a rear residential property that extends along Jersey Street. The shop frontage to each unit has been altered but the design intent remains visible. The units are unified by the rendered parapet that wraps around to the Jersey Street frontage of the corner unit. Due to the change in land levels, the verandah is stepped to allow for full height windows in each unit. The Corner unit has an extensive glazed frontage with windows to both Cambridge Street and Jersey Street as well as to the angled wall which incorporates the glazed entrance door. A seven-section highlight extends above all the windows and the door creating a continuous glazed frontage. The adjoining units have both undergone minor adaptations to the presentation of the original shop frontages. Both have retained the metal framed high level windows above the main shop windows although the east unit has adapted the central window to accommodate an air conditioning unit. The western unit has changed the shop doors to a single door with narrow side light. All three frontages are rendered brickwork with the plinth painted a contrasting colour. | • The place has aesthetic value as an example of an Inter War combined shop and retail premises with some original detail.  
• The place has historic value for its association with the development of Wembley in the Inter War period and this section of Cambridge Street which was, and continues to be, a retail hub.  
• The place has social value for its continuity of function as a commercial premises since the 1930s. | Category 3 |
| 70           | 338- | Cambridge Street | 342          | Wembley   | A row of four inter-war units under a single parapet and stepped awning. All four shop frontages have been altered to incorporate wider door openings with double doors and large display windows. The original arrangement of main shop windows and highlights has been retained albeit interpreted in a contemporary manner. The corner unit has an angled entrance with a further shop window on the return frontage to Alexander Street. This unit also has a lower verandah canopy although it is of the same style as the canopy to the adjoining units and supported by tie rods. The walls are predominantly rendered brickwork though the lower sections of the facades have been tiled to a couple of units. | • The place has aesthetic value as an example of an Inter War combined shop and retail premises with some original detail.  
• The place has historic value for its association with the development of Wembley in the Inter War period and this section of Cambridge Street which was, and continues to be, a retail hub.  
• The place has social value for its continuity of function as a commercial premises since the 1930s. | Category 3 |
| 72           | 347- | Cambridge Street | 349          | Wembley   | 347 Cambridge Street (Lot 47) is a post war single storey brick commercial premise which originally contained three retail units. The internal planning has been altered resulting in the amalgamation of two units to create Lawleys and the subdivision of the adjacent unit to create two small retail outlets. The units are of brick construction which has not been painted. A verandah awning extends across the façade supported on tied rods and has pressed metal lining to the underside. Despite the alterations to the frontages, they have retained an air of the traditional retail unit with large shop windows and glazed doors. The highlight windows have been retained though boarded over to the central shop units, Adjoining at 349 Cambridge Street (Lot 46) is a post war single storey retail unit with art deco inspired motif to the parapet. The building is of brick construction rendered to the façade and painted brickwork to the side. The parapet contains a central rendered fin and rendered capping, both painted in contrasting colour to add emphasis to the detail. The shop has retained the recessed entrance and angled shop windows with highlights across the entire façade. Although alterations have occurred, the original | • The place has aesthetic value as an example of a Post War combined shop and retail premises with original detail.  
• The place has historic value for its association with the development of Wembley in the Post War period and this section of Cambridge Street which was, and continues to be, a retail hub.  
• The place has social value for its continuity of function as a commercial premises since the 1950s. | Category 3 |

| 79           | Horton House    | 24A       | Connolly St          | Wembley  | Single storey traditional brick and iron house. The house incorporates an asymmetric planform with shallow projecting bay with full height timber framed sash windows, extending from ground level to the verandah canopy. Two rendered bands extend around the façade creating the traditional blood and bandages character that was popular in this era. The main roof is a complex hip with a gable to the bay and gables to the south side of the roof. Tall brick chimneys with rendered moulding are positioned around the roof. The entrance is located on the south side of the building, set back behind the main building frontage. | • The place has aesthetic value as a good and intact example of the Federation Queen Anne style.  
  • The place has historic value for its association with the early settlement of the Cambridge area in c1860s by the Roman Catholic Church who acquired several parcels of land in the area.  
  • The place has social value for its demonstration of the form and style of home built for a skilled tradesman and his family. | Category 3                                                                                       |
| 87           | Meyer House     | 64        | Reserve St           | Wembley  | A large house which presents as single storey with additional accommodation in the roof space. The house has a symmetrical façade with a centrally placed entrance flanked by timber framed 3 section windows. The roof is gabled clad in a dark tile with two large dormer windows which is not an original feature of the house. The roof is steeply pitched which continues down to form the verandah canopy at the same pitch. The verandah extends across the full extent of the façade with the canopy supported on masonry piers with timber posts. The house is sited in an elevated position. | • The place has aesthetic value as a good intact example of the Inter War Old English style executed in brick which has retained original details.  
  • The place has historic value for its association with the establishment and development of this part of Wembley in the Inter War years.  
  • The place has social and historic value as an example of a home for a professional man and his family in the Inter War period. | Category 3                                                                                       |
| 88           | Orr House       | 66        | Reserve St           | Wembley  | Single storey brick house of traditional design and planform. The hipped roof has been reclad with colorbond, retaining the two red brick chimneys. The roof continues down with a slight break of pitch to form the verandah canopy. The verandah extends around the house, accessed via steps from the front and supported on a rendered masonry retaining wall. The deck is timber, with a simple timber balustrade and timber posts supporting the canopy. The house has a symmetrical façade, the centrally placed entrance consists of single door with side panels and lights and fanlight across the entire in a traditional form. The entrance is flanked by three section timber framed windows with integral highlight planes. | • The place has aesthetic value as a good intact example of the Inter War Arts and Crafts style executed in brick which has retained original details.  
  • The place has historic value for its association with the establishment and development of this part of Wembley in the Inter War years.  
  • The place has social and historic value as an example of a home for a professional man and his family in the Inter War period. | Category 3                                                                                       |
| 89           | Olive Trees, St Columbas Avenue | St Columbas Avenue | Wembley | The Olive Trees are located on the verge adjacent to No. 1 St Columbas Avenue. There are several trees on this small triangular road reserve at the junction of St Columba’s Avenue and Gregroy Street. The olive trees are large and appear to be in good condition. A plaque is located at the base of the largest tree on the apex of the triangle which denotes the origin of the trees. | • The trees have aesthetic value as large mature trees in good condition which contribute to the leafy character of the streetscape and are landmarks on this prominent corner.  
  • The trees have historic value for their association with the foundation of the monastery at ‘New Subiaco’ in the 1850s.  
  • The trees have historic value for their association with the olive oil industry conducted by the Sisters of Mercy, and which helped provide funds for the ongoing operation of the orphanage and founding home located at what is now the Catherine McAuley Centre. The olive oil manufactured at St Joseph’s Orphanage won first prize at several Royal Perth shows.  
  • The trees have social value for their contribution to the streetscape and are valued by the community. | Category 3                                                                                       |
| 91           | Hope Residence (tim) | 92       | Blencowe Street     | West Leederville | Substantial Federation Queen Anne house of brick and tile construction located on a corner lot. The design of the house takes full advantage of its location with three principal elevations to the street along Blencowe Street, Rasilp Street and the intersection of the two roads. The house is of red brick construction with rendered detailing, terracotta tiled roofs and decorative redbrick and rendered chimneys. The roof is a complex form of hips and gables with a later addition dormer. The gables are lined with bottled fibre panelling. The verandah extends around the front of the house, positioned under the eaves. The house has been extended to the rear which does not impact on the presentation of the house. | • The place has aesthetic value as a large and well maintained Federation Bungalow style residence built of brick and tile that features many original details.  
  • The place has historic value for its association with the establishment and development of this area of West Leederville in the early 20th century.  
  • The place has historic value for its association with Percy George Samuel Hope, an influential figure in the development of town planning in Western Australia in the early 20th century.  
  • The place has social value for its demonstration of the scale and form of housing for professional men and their families in the early 20th century. | Category 3                                                                                       |

<td>Traditional Federation era brick and iron house that has undergone some alteration to its original finishes which has impacted on its level of authenticity. Originally a face brick house with a tuckpoint finish the brickwork has been painted but traces of the tuckpoint can still be seen under the paint. The rendered bands that traditionally created the 'broad and bandage' aesthetic have been painted a different colour to the brickwork and therefore remain a distinctive feature. The house is of symmetrical planform with a centrally placed entrance door flanked by pairs of 1-over-1 timber frame sash windows. The doors and windows are partially obscured by flyscreen but original detailing has been retained. The roof is hipped with a vented gablet and brick chimneys with rendered corbelling. The verandah canopy is separate to the main roof, positioned approximately three brick courses below the eaves. Both the main roof and canopy</td>
<td>The place has aesthetic value as a good, largely intact example of a brick Federation Bungalow style residence exhibiting original form and detail. The place has historic value for its association with the settlement of West Leederville in the early 20th century. The place has social value for its demonstration of the form and scale of housing built for skilled tradesmen and their families in the early 20th century.</td>

| 109          | Residence, 101 Northwood Street | 101       | Northwood Street    | West Leederville | Substantial brick and tile house of traditional planform and detailing. The house is sited on a slope with the faceted bay being supported on a deep limestone plinth. The house is located on a corner lot and has a relationship with both Northwood Street and Ruislip Road, the principal façade being to Northwood Street. The house is tuckpointed, to the top of the windows with render above. The front elevation is of asymmetric planform with a faceted bay window tucked underneath a decorated gable. A verandah extends across the recessed section of the façade and wraps around the return frontage along Ruislip Street. The main roof is hipped with a gable to the projecting wings to both frontages. The bullnose verandah canopy is a separate structure, positioned below the eaves, and clad in red colorbond. The faceted bay contains three windows, each with leaded lights with floral stained glass patterns. The main window is a three section opening with highlight windows whilst each of the side panels contains a single window with highlight. The sills are moulded render. The chimneys are a combination of brick to the lower courses of the stack and rendered to the upper section and to the corbelling, each with a terracotta honeypot flue. | • The place has aesthetic value as a good intact example of a Federation Arts and Crafts style residence built in brick and tile which retains much of the original detail and form although the setting has been diminished.  
• The place has aesthetic value as a prominent landmark in the street since the early 20th century.  
• The place has historic value for its association with the establishment and development of the West Leederville district in the 1910s.  
• The place has social value for its demonstration of the type of housing for professional men and their families in the early 20th century. | Category 3 |
| 115          | Residence, 314 Railway Parade | 314       | Railway Parade      | West Leederville | A single storey stone, brick and tile house with asymmetric planform, facing Railway Parade. The façade incorporates a projecting bay with timbered gable detail and two timber framed sash windows. The recessed section of the façade incorporates a further pair of timber framed sashes. The hipped roof to the main house was originally clad with Marseille tiles with prominent brick and rendered corbeled chimney but has recently been clad with corrugated Zincume. The verandah extends across the full width of the façade and returns around to the east elevation to the main entry. The deck is timber but the canopy was in the process of being replaced at the time of inspection. The rear section of the building has brick facing to the narrow section of south elevation and red brick beyond. | • The place has aesthetic value as a largely intact example of a Federation Bungalow style residence built in stone and tile.  
• The place has historic value for its association with the establishment and development of West Leederville in the early 20th century.  
• The place has social value as a demonstration of the type of residence occupied by skilled tradesmen and their families in the early 20th century. | Category 3 |
